

# MEDICAL BIOCHEMICAL GENETICS FELLOWSHIP

The Division of Genetic and Genomic in The Ohio State University Department of Pediatrics at Nationwide Children's Hospital is recruiting an individual for a one-year fellowship in Medical Biochemical Genetics. Successful completion of this training qualifies the candidate for the ABMGG board certification examination in this specialty. The Division maintains a very active program in the diagnosis and management of metabolic disorders, including NBS follow-up, enzyme replacement therapy and active research in the field of metabolic medicine. Additionally, the Division supports a Clinical Genetics residency program, and fellowships in Molecular Genetics/Cytogenetics. Nationwide Children's Hospital is 1 of 8 Regional Genetics Centers funded by the Ohio Dept. of Health.

The successful candidate must be board certified or eligible in Clinical Genetics and Genomics. Some experience in the diagnosis and management of patients with metabolic disorders is desirable. The successful candidate will join an expanding team that consists of nine clinical geneticists including four biochemical geneticists, 20 pediatric genetic counselors, two dietitians, three nurse practitioners, a metabolic nurse and full genetics laboratory services (cytogenetics, molecular, and biochemical genetics). It is expected that the position will be filled at the PL-4 or PL-5 level. Excellent opportunities for clinical or collaborative research projects exist within the department. Requirements include a Personal Statement, a completed application form (available at our website) and three letters of recommendation including one from the Genetics Program Director.

The Ohio State University is an Equal Opportunity, Affirmative Action Employer. Women, minorities, veterans, and individuals with disabilities are encouraged to apply. Graduating residents are welcome.
